Use Case: Newbie Auger User

Background

Auger is designed to help companies decide which of the many open-source projects available on the web today. The information it provides will likely need to be accessed by people coming from a non-software development background as well, such as a business executive, someone in finance, etc. People of this background are entering the documentation with a minimum of software experience and will require more thorough documentation walking them through what Augur does and how to install and use it.

Description
First, the user will find the Welcome landing page which will introduce them to what Augur does and what it can be used for. They can then easily navigate to the beginner installation instructions page with clearly listed and illustrated steps. From this page they can also easily find the Troubleshooting page and the github itself where they can submit issues. After installation, they will be led to the External developer page where they can learn how to use Augur's functionalities and optionally continue onto the internal contributor page as well.

Triggers

Open Website

Actors

Non-software developer user

Preconditions

User has internet access

Main Success scenarios

User understands the purpose of Augur and what it can be used for well enough to determine their purpose with the software; User is able to determine their experience to follow the correct documentation to install Augur with no errors; User is able to use Augur for their own purposes.

Alternate Success scenarios

User understands the purpose of Augur and what it can be used for well enough to know that Augur is not useful for them and they waste no further time on the documentation site.

Failed End Condition

User does not understand what Augur does and continues searching in various places in the docs, or seeks an answer elsewhere.
OR, user cannot find the links in the documentation they need and do not follow the path listed in description. They attempt to install using the QuickStart page and are unsuccessful, or cannot find the information they need.

Extensions

Links to examples of Augur usage, use case examples of what others have done with Augur

Steps of Execution

User navigates to Augur oss-augur.readthedocs.io webpage, Welcome page opens by default. User then follows links in the task bar, welcome page, or each page to navigate through installation and implementation.
